NETWORK VULNERABILITY /  
ANTI-VIRUS SERVICES

## WHAT HAPPENS TO YOUR BUSINESS WHEN A VIRUS HITS?

Consider that every business today uses computers in some form or fashion, and when those computers cannot do what they are intended to do, the result is chaos.

Can you even remember how you ran your business before computers?

In short, what happens to your business can be anything from a few hours of lost time to complete data loss that may not be recoverable.

From 2006 to 2011, sources have estimated the cost of computer crime, malware and virus attacks went from 67 billion annually to 114 billion annually.

Can you afford to take the chance that you won't be hit? Ask us how ProDefense Max can help.

POWERED BY

## WHY WE CHOSE PRODEFENSE MAX

There are so many AV Products on the market, but we have moved to a managed platform that gives us and our clients far greater service capabilities than were available in the past. ProDefense MAX managed services include the following system reports and modules that allow us to track information after our clients specific needs.

- Daily Safety Check
- Daily Health Check
- Automated Tasks Management
- Daily, Weekly and Monthly Reporting
- Asset and Inventory Reports
- System Status Report

There is availability to add on MAX Wipe Service to ProDefense MAX System Console. This service would allow Alliance Solutions Partners to remotely lock and/or delete confidential business information in the case of a disgruntled employee or stolen device.
